

Assignment 4: Individual Design Proposal

Project: Seniors Managing Diabetes

Jhony Miller Campanha

Design

In Phase 3, simplicity and usability were chosen as the main topics to care about in the system. My idea has a simple design, with easy understanding and usage.

A paper prototype was created, and the *Prototyping on Paper (POP)*, a free application to help create and manage prototypes, was used in order to better show the functionality of the system.

The prototype can be found at:

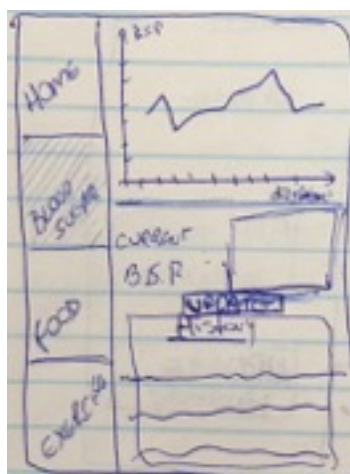

<https://popapp.in/w/projects/54fdad7f9f4d839f31f30c51/preview/54fdae8e9f4d839f31f30c76?transition=none&t=1425912504700>

The following pictures demonstrate a little about the main screens at the application:

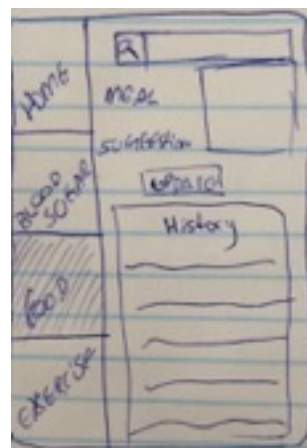

Main screen of each category:

Home screen

Blood Sugar Level screen

Foods screen

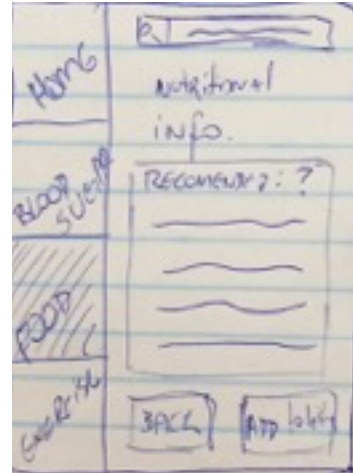

Exercises screen

Reminders screen:

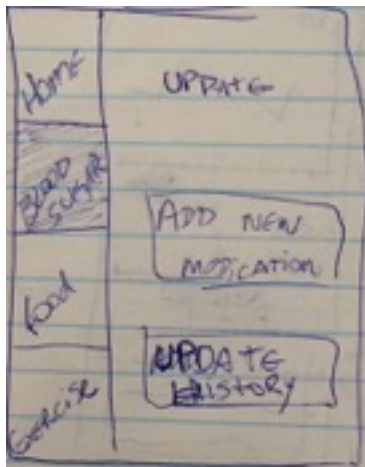

Reminders screen

Search information screen:

Search information screen

Update information screen sample (based on Blood Sugar Level):
